WATERPROOF SMART BULB LIGHT

LED STREET LIGHT BULB 30-50W

DESIGN CONCEPT

1. Based on the pain points and defects existing in similar products on the market, this product adopts the waterproof design of the whole lamp structure, and the overall design of industrial style makes the lamp highlight the angular texture
2. After the lamp is installed, the angle of the light-emitting part can be adjusted twice, and the designated area of the light can be precisely controlled in the actual use process
3. The optical lens adopts polarized light design, which reduces the energy waste caused by light irradiation on invalid areas in actual use

SHARP EDGES EXCELLENT HEAT DISSIPATION

HIGH-PURITY ALUMINUM HEAT SINK

1. The light source board is directly attached to the pure aluminum radiator, and the straight-forward direct heat dissipation method is always the best solution
2. The horizontal flakes on the back of the heat dissipation teeth conform to the uniform air flow direction, which not only ensures heat dissipation, but also has a more aesthetic feeling
3. The sharp-edged metal texture and the white lamp body complement each other, everything is so natural and just right

OUTDOOR WATERPROOF

IP65 WATERPROOF GRADE

1. Under the premise of ensuring excellent heat dissipation performance, multiple waterproof rubber rings are set inside the lamp body. Perfect cooperation between parts to achieve high-performance structural waterproofing.
2. Through the precise waterproof and heat dissipation structure, it can work normally in any harsh environment.

345 DEGREE ARBITRARY ADJUSTMENT

HORIZONTAL LEFT AND RIGHT ADJUSTMENT ANGLE DESIGN

1. Directional lighting products are often in a single direction. This product adds a horizontal, left, and right angle adjustment function of 345 degrees.
2. The lamp body is equipped with a scale mark, which truly realizes the demand for precise lighting in the actual use process

NTC INTELLIGENT TEMPERATURE CONTROL

DUAL TEMPERATURE CONTROL SELF-RECOVERY PROGRAM

1. The NTC smart probe detects the temperature of the dynamic high-temperature components at all times. When the driver temperature is higher than the normal preset value, the program automatically adjusts the power. When the driver temperature is less than or equal to the preset value, the power automatically returns to the normal standard.
2. The radiator is equipped with a temperature control probe. When the product is used in an abnormal high temperature environment and the temperature of the radiator is higher than the preset value, the program will automatically reduce the current power by 30%, and the power will automatically return to normal after the temperature returns to the normal value. standard.
