## 1. Test Method

Ambient Condition.....:	24.9℃
Number of hours operated prior to	
Measurement .....(h):	0h
Stabilization time .....(h):	1h/time
Orientation(burning position) of SSL product during	
test.....:	Down
Test Item.....:	Room Temperature Initial Measurement $T_{b,0}$ (71.0℃)
Test Method .....	<p>The sample was tested according to the IES LM-79-2008.</p> <p>Photometric paramters were measured using an integrating sphere, a spectroradiometer and software. The ambient temperature condition inside the sphere was maintained at 25° C <math>\pm</math> 1℃. The sample measurements were made using a spectroradiometer connected by a fiber optic cable and detector through the detector port of the integrating sphere. The sample was self-absorption correction used for integrating sphere, then operated at rated voltage and was stabilized before measurement. Chromaticity coordinates, correlated color temperature and color rendering index were calculated from the spectral radiant flux measurements taken at 1 nm intervals over the range of 380 to 780 nm.</p>
Test Item.....:	Measurement at First Elevated Temperature
Test Method.....:	<p><math>T_{b,1} = T_{b,0} + 25^{\circ}\text{C}</math> (96.0℃)</p> <p>The sample was tested with a device that controls the temperature <math>T_b</math> of the UUT, so that <math>T_b</math> reaches no lower than <math>T_b = T_{b,0} + 25^{\circ}\text{C}</math>. Photometric paramters were measured using an integrating sphere, a spectroradiometer and software. The ambient temperature condition inside the sphere was maintained at 60° C <math>\pm</math> 1° C. The sample measurements were made using a spectroradiometer connected by a fiber optic cable and detector through the detector port of the integrating sphere. The sample was self-absorption correction used for integrating sphere, then operated at rated voltage and was stabilized before measurement. Chromaticity coordinates, correlated color temperature and color rendering index were calculated from the spectral radiant flux measurements taken at 1 nm intervals over the range of 380 to 780 nm.</p>
Test Item.....:	Measurement at Second Elevated Temperature $T_{b,2} = 88.4^{\circ}\text{C}$
Test Method.....:	<p>The sample was tested with a device that controls the temperature <math>T_b</math> of the UUT, so that <math>T_b</math> reaches no lower than <math>T_{b,0} = 71.0^{\circ}\text{C}</math>. Photometric paramters were measured using an integrating sphere, a spectroradiometer and software. The ambient temperature condition inside the sphere was maintained at 50° C <math>\pm</math> 1° C. The sample measurements were made using a spectroradiometer connected by a fiber optic cable and detector through the detector port of the integrating sphere. The sample was self-absorption correction used for integrating sphere, then operated at rated voltage and was stabilized before measurement.
