Key Features

The luminaire design is based on a three-compartment concept, consisting of an LED engine, power supply and spigot compartment. This allows for easy installation without the risk of jeopardizing the IP integrity of the luminaire. Furthermore, the hinging concept allows the easy replacement of the LED engine in case of future upgrades or maintenance.

Surge protection: 10kV/10kA
Optional: 20kV/20kA

To maximize the reliability of the LEDs, the photometrical engine is completely sealed to IP 66. This ensures that the photometric performance is maintained over time.

The power supply is automatically disengaged when opening the luminaire.

The electronic power supply is suitable for operation with a 85-305V 50Hz single phase system. (DC versions are available). The power factor is rated at $\geq 0,95$. The efficiency is rated 89%.

Special use of stainless steel inserts to prevent galvanic corrosion between stainless steel and aluminum, allowing future removal of the luminaire from the spigot

The luminaire housing is manufactured of marine-grade aluminum

Secured by stainless steel latches and access screw

Integrated vent (breather) for rapid pressure equalisation and reduction of condensation

NEMA 7-Pin complete with plug-in surge protection for easy replacement
